## STORZ SUCTION SEALS FOR DRAFTING

The question often arises - can we draft through our Harrington intake valves? The answer is yes, with a suction seal in the Storz adapter on the valve.

The raised, o-ring face of the Storz suction seal, which differs from the flat face of a Storz pressure seal, allows the valve to hold and maintain a vacuum when pressed against a Storz suction seal in the suction hose coupling.

Suction seals do have the ability to work as a pressure seal in supply line situations as well. Please see the drawings below - note the o-ring style foot. This is an AWG design that helps ensure that the gasket will remain in place during pressure or drafting operation.

All existing valves and adapters may be retrofitted with Storz suction seals. New valves and adapters may be ordered with Storz suction seals at no additional cost, simply specify "with suction seal" on your order.

## SAME DAY SHIPPING

We're pleased to be able to offer same day shipping when required.

It is important to keep in mind that we should have a hard copy, either faxed or emailed to us, by 12:00 noon EST, to process same day shipments. This should allow us the time needed to enter the order and assemble the parts.

We will always do our best to react as promptly as possible.

## REMINDER:

### WARRANTY UPDATE - H500S / H500B

Effective June 1, 2007, the H500S piston intake relief valve now has a limited 5 year warranty against defective material and workmanship. The H500B piston intake relief valve now has a limited 10 year warranty against defective material and workmanship.

Warranty details prior to June 1, 2007, remain in effect.

### NOVEMBER PRODUCT OF THE MONTH: STORZ TEST CAP & ADAPTER SET

November's product of the month is the Storz Test Cap and Storz Test Adapter Set.

The benefits include automatic air bleeder valve and tightening rings to prevent Storz seal failures during annual service testing of fire hose.
